## PRODUCT FEATURES

1. The lamp adopts integrated structure design, with better heat dissipation design and longer life;
2. Using LUXEON 3030 lamp beads, the whole lighting effect is up to 170 LM/W;
3. The solar panel is made of Monocrystalline silicon, with a higher conversion efficiency, up to 18%, and a service life of up to 25 years;
4. Using the most advanced MPPT tracking control technology to improve system efficiency and reduce costs;
5. It has functions of light control, time control, dimming, intelligent power saving + morning light;
6. Solar controller built-in lightning protection module;
7. Using ternary lithium battery technology, the battery capacity is high;
8. 365 days uninterrupted power.
9. Three control model: **Time control + light sensor control + motion sensor control**

**Time control:** It can be divided into 5 time periods, which is more humane and energy-saving;

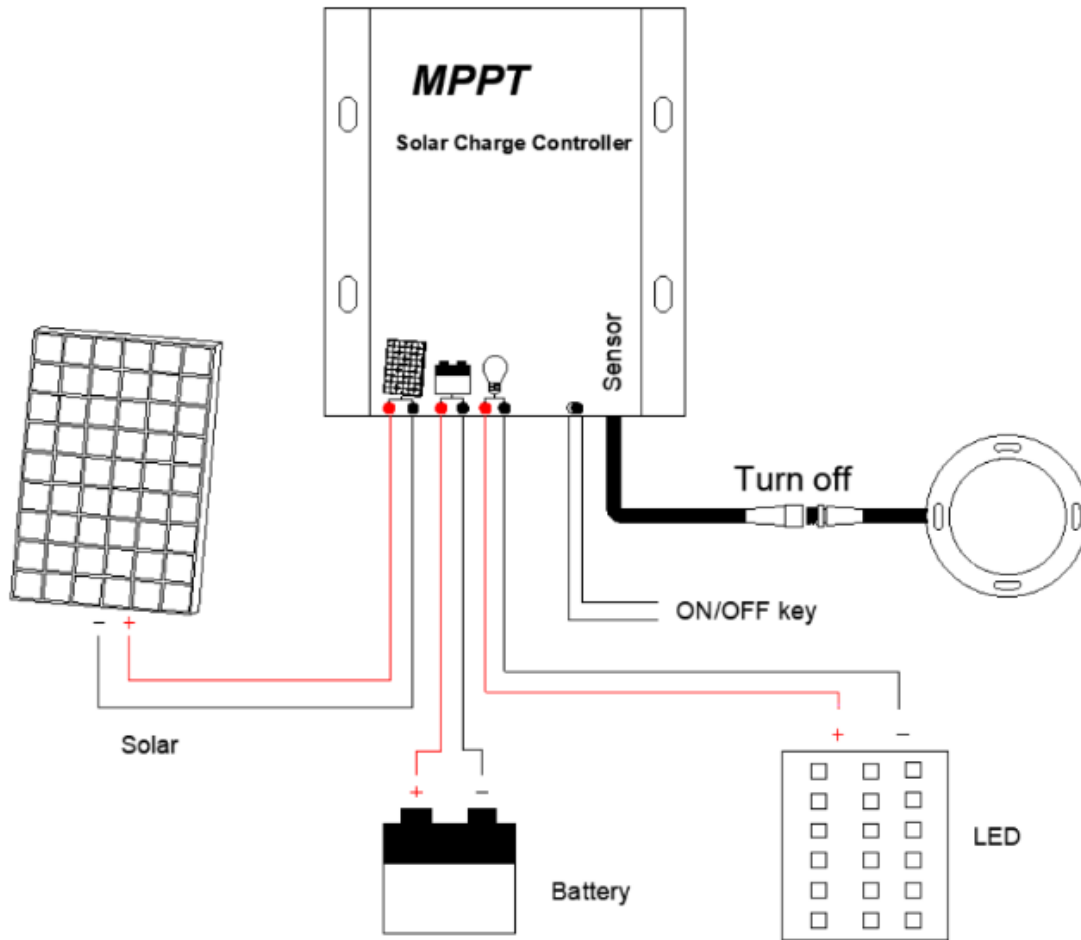

**Light sensor control:** When the evening comes, when the solar panel battery voltage is lower than 3V, the lamp will automatically turn on;

**Motion sensor control:** A motion-sensing energy-saving mode. When a moving object is sensed, the lamp will have 100% brightness; when no moving object is sensed, the lamp will be in a low-power and energy-saving state, with a brightness of 10%-100% (can be set)

## INTERNAL WIRING & WARNING

1. Do not install in high temperature, closed and non-ventilated areas;
2. The installation location should not be installed under the tree or the place where there are obstructions. The solar panel must be exposed to sunlight in all directions;
3. When the product is stored in the warehouse, it needs to be charged and discharged every 3 months;
4. When the product is faulty, you need to find a professional to deal with it;
5. Eliminate scrapped products, must be handed over to the relevant departments for Centralized processing.

## PRODUCT TROUBLESHOOTING

Issue	Check points
Light Flickers	<p>Check all wiring for disconnections, shorts and burnt wiring and connections. Confirm steady input voltage to the light fixture, fluctuating input voltage will harm the LED driver and can lead to premature failure. Lights with photocells can have photocell tag from ambient light or light reflecting at the sensor. Simply cover the photocell completely and see if flickering continues while the photocell is covered. Call Tech Support for help if none of the above solves the issue.</p>
Light does not work at all.	<p>Check all wiring for disconnections, shorts and burnt wiring and connections. Confirm steady input voltage to the light fixture, fluctuating input voltage will harm the LED driver and can lead to premature failure. If input voltage is not in the voltage range of the fixture, you will need to find the source of your input voltage issue. Call Tech Support for help if none of the above solves the issue.</p>
