LUMINOUS INTENSITY DISTRIBUTION DIAGRAM

PC optical lens with high light transmission efficiency is adopted to ensure a more wider illumination range for you.

## PRODUCT INSTALLATION

8. Adjust the panel to the direction with adequate sunlight

9. Installation is finished, it will light up at night

### HOW THE SOLAR LIGHT WORKS:

During the daytime, the solar panel converts sun power into electricity and charging the battery. At night, the light turn on automatically using the electricity stored in the battery.

### PRECAUTION:

Please install in a sunny place where it can receive direct sunlight for at least 6~8 hours each day , avoid installation near a tree which creates overcast on solar panel, or it will affects the charging effect. Any shadow or overcast on solar panel during the day impact the effective charging of battery. Then the brightness will be changed when battery power is low. The selected locations should not be near lights, otherwise maybe cause the solar light to turn off prematurely.

### ATTENTION FOR THE USE OF THE FIRST TIME:

When you get the solar light, the battery is only 50%-60% full charge because of shipping. So we suggest you please open the switch and then place the solar light in a location where it can receive a full 6-8 hours of sun power to recharging the battery to reach maximum capacity, and then to install the solar light where you want.

Activate Win.

PRODUCT TROUBLESHOOTING

Issue	Check points
Light Flickers	Check all wiring for disconnections, shorts and burnt wiring and connections. Confirm steady input voltage to the light fixture, fluctuating input voltage will harm the LED driver and can lead to premature failure. Lights with photocells can have photocell tag from ambient light or light reflecting at the sensor. Simply cover the photocell completely and see if flickering continues while the photocell is covered. Call Tech Support for help if none of the above solves the issue.
Light does not work at all.	Check all wiring for disconnections, shorts and burnt wiring and connections. Confirm steady input voltage to the light fixture, fluctuating input voltage will harm the LED driver and can lead to premature failure. If input voltage is not in the voltage range of the fixture, you will need to find the source of your input voltage issue. Call Tech Support for help if none of the above solves the issue.
